SMOKERS GET THE MESSAGE

Quitting smoking is no small feat.

Despite the huge amount of information we have about the deadly effects of smoking on our health, giving up for good is not easy for those who are addicted and ongoing support is essential. Researchers in the UK have found help from our technologically orientated society, in that mobile phones may be the key to prolonged abstinence.

Researchers looked at 5800 people from a study involving personalised quitting advice and support via mobile phone text messages. Half of the participants were allocated to the intervention group and received an array of motivational messages that encouraged changes in habits and behaviour. The remaining half received a variety of texts messages about the trial that were unrelated to quitting. Abstinence, or lack thereof, was verified at six months using tests for a nicotine byproduct called cotinine.

The results were highly significant. The quit rate in those receiving supportive messages was double that of the control group. Given that phones are widespread and affordable, this programme may be helpful in assisting smokers who want to quit but are finding it tough to do so. If you want to quit smoking, but don't know where to start, consult your doctor for some informed advice or call Quitline on the number below.

JUNK JUNKIES

Do you love your bacon and eggs every

morning? Do you rely on a daily chocolate fix to get you through those long afternoons at work? Well according to research, you may actually be addicted to junk food. Scientists are discovering that 'junk food addiction' can be a real form of dependence, much like being addicted to drugs or alcohol. Studies have found that the nutrient profile of processed foods with a high fat and sugar content can trigger pathways in our brain that are linked to addiction.

Researchers tested out this theory on rats by giving one group unlimited kilojoule-dense food such as bacon, chocolate, chips and cake and the other group a healthy diet. They put the foods on a mat that could administer small electric shocks to the rats' feet. The rats who had been on the junk food diet repeatedly went back for more regardless of the electric shocks they received – the desire for the food outweighed the pain of the shocks. The group exposed to the healthy diet, however, when faced with the threat of an electric shock, stopped eating.

The researchers then removed the junk food from the rats and replaced it with healthy chow. The results were incredible. Faced with the thought of having to eat healthy foods after their extended junk food binge, the rats stopped eating altogether for two weeks. When researchers examined the brains of both groups of rats they found less dopamine receptors present in the rats that were fed junk food. Dopamine is a neurotransmitter that helps control the brain's reward and pleasure centres – and changes in their expression are characteristic of drug addiction in humans. When the dopamine receptors were blocked in the rats that had been fed the healthy food, they became compulsive junk food consumers too.

This study may shed light on why people continue to eat so much junk food, despite knowing how bad it is for their health. The nutrient profile of junk foods may cause changes in the brain's capacity to gauge appetite and satiety (the feeling of fullness after a meal). Therefore, the question of whether self control and willpower is enough to fight the battle of the bulge is one that many researchers around the world are now looking at ways of overcoming.

Good Health on the Menu

STICKY DATE PUDDING

Try a healthier version of a classic, mouthwatering dessert.

Ingredients:

- 250g dates, pitted and chopped
- 1 cup of water
- Olive oil cooking spray
- 1 tsp bicarbonate of soda
- 50g olive oil spread
- ¼ cup caster sugar
- 3 tbs golden syrup
- 2 eggs
- ¾ cup self raising flour
- 1/2 cup plain flour

Method

- 1. Preheat oven to 180 degrees
- Grease six spaces in a muffin tray with olive oil spray then line with baking paper
- Cook dates and water in a saucepan over medium heat until dates soften and almost all water is absorbed
- 4. Remove dates from saucepan and mix with bicarbonate of soda
- 5. Cool for 15 minutes
- 6. Beat spread, sugar and 1 tbs golden syrup together until combined
- 7. Add eggs, one at a time, and beat after each one
- Mix date mixture in with eggs and sift flours together over mixutre. Stir to combine
- 9. Spoon mixutre into muffin tray
- 10. Bake for 30 minutes
- 11. Leave to cool for 5 minutes
- 12. Put warm puddings onto plate, drizzle with remaining golden syrup and serve

Recipe serves 6. Serve with scoop of low fat, sugar free vanilla icecream for extra flavour.

Note: this is not calorie free so make sure you enjoy in moderation and practice portion control!

Enjoy!

DID YOU KNOW? Favourite team loses, Junk food wins

Many people live and breath their most beloved sports team. A game lost can cause profound sadness and a game won, extreme happiness. Interestingly, researchers have also found that the results of our favourite team's match can affect the way we eat.

Researchers in the US analysed eating patterns in various cities after a series of football matches with close final scores. As US football support is often regionally orientated, food consumption in both winning and losing cities was measured after the games. In the area of the losing team, an increase in saturated fat and high energy junk food consumption was identified. In regions of winning teams the opposite was true, and a tendancy towards healthier food purchasing was observed.

Researchers from this study argue that a team losing a game is perceived as threat to one's self, and therefore can effect the emotional wellbeing of the person mourning the loss. When people are down, for whatever reason, it is common to try and manage these feelings by reaching for comfort foods. While our favourite sports team may play an important role in our life it is important to remember that it is just a game. Acknowledging what is really important in life, and viewing sporting loss' with perspective can help reduce the need for comfort foods after a tough or close defeat on the field.

A BREATH OF FRESH AIR

Most people experience bad breath at one point or another in their life. Whether it's when we wake up in the morning or when we are dehydrated, it can usually be helped by a mint or by drinking some water. There are, however, people for whom bad breath is a constant issue; it's called halitosis.

Halitosis is mostly caused by bacteria that live within the surface of the tongue and throat and affects roughly 2.4% of the adult population. Other common causes include dental infections, poor oral hygiene, dry mouth (caused by medicines, alcohol or stress) and smoking, which deprives the mouth of oxygen. There are a range of symptoms that characterise bad breath and may indicate a need for treatment. Symptoms include a white coating on the tongue, post nasal drip, mucous, a burning tongue, thick saliva, and a constant sour, metallic taste in the mouth.

Having chronic bad breath can compromise quality of life, making people self-conscious and withdrawn. It's important to know that there are a number of treatments available tailored to the various causes of halitosis. Good oral hygiene is very important, as well as a number of mouthwashes, lozenges, sugar-free chewing gum and toothpastes which have been developed to assist with the condition. Avoiding dehydration is another useful measure to take and, in rare cases, antibiotics can be helpful in reducing the bacteria growth. For more information, or to discuss the best treatment option for you, talk to your GP or dentist.

Dr Norman Swan

CHLAMYDIA **NOT TO BE IGNORED**

A few weeks ago, Melbourne based researchers released statistics about chlamydia infections which were guite troubling. Chlamydia is a sexually transmitted infection (STI), which if undetected and untreated can lead to inflammation of the uterus (womb) and the Fallopian tubes which take eggs from the ovary to the uterus. This so called pelvic inflammation can cause pain and infertility. The irony is that chlamydia is easily diagnosed from a urine test and very easily treated with antibiotics - and even more to the point, it's preventable with the use of condoms.

The study surveyed 15 pathology laboratories looking at chlamydia tests ordered by GPs and other doctors in young people. What they found was that the highest rate of positive results (around 13%) was in young teenage girls of about 14 years old. Similar rates were found in slightly older boys but in general, the older the person

being tested, the lower the rate of positive chlamvdia findings.

The messages from this are what people have been saying for a long time, which is that the earlier a person starts having sex, the riskier it is, partly because they are too young to be assertive about the use of condoms. It also reinforces the fact that kids are having sex at younger ages and it's important they hear safe sex messages and that if they are sexually active they develop a trusting relationship with their doctor so they can have regular chlamydia testing and treatment if needed. Being judgemental won't help and certainly won't do much to stop a young girl growing up into an infertile woman.

What's needed is your doctor.

MYTH VS FACT? LIGHT / SOCIAL SMOKING DOES NOT EQUAL LOW RISK

Contrary to anecdotal reports, light or social smokers are not off the hook when it comes to the serious health consequences of smoking cigarettes. Research emerging from the Sax Institute's 45 and Up Study (a long term study following the health and wellbeing of men and women aged 45 years and over living in New South Wales) revealed that even moderate and light smokers have over double the risk of death when compared to non-smokers. The analysis looked at 200,000 people over a four year period, finding that current smokers were reducing their lifespan by as much as a decade. Furthermore, the analysis found that two thirds of deaths in people that currently smoke can be directly attributed to smoking.

The figures also show that paradoxically, while the risk of death increases with the number of cigarettes smoked per day, the most rapid rise in danger is in the first five or ten per day. The negative health implications of smoking are countless cancer, heart disease, lung disease, gum disease, blindness - the list goes on. Cancer Council NSW, a major partner of the 45 and Up Study, stresses that it is never too late to guit; giving up cigarettes at any age after any level of addiction is better than nothing, and reduces your risk of death or disease. Of course, the sooner you quit, the better so see your GP or call quitline on 13 QUIT (13 7848) for advice on how to kick the habit for good.

PRACTICE UPDATE

East Adelaide Healthcare General Practice, established in February 2001, is dedicated to providing the best care and service, thereby ensuring the best health and wellbeing of our patients.

We believe your health is best managed by continuous care from the same source, however, we will refer you for specialist opinions, investigations and treatment when necessary.

To provide the best possible service and facilities for your needs it is necessary to charge realistic fees for treating you. Prompt payment of our account will help us keep fees down. Pensioners and Healthcare Card holders are treated at a discounted gap payment.

Credit card and EFTPOS facilities are available for your convenience. Our fees appear on the noticeboard and are available on request at reception. Additional services performed at the time of consultation may attract further charges. Services away from the surgery or provided after hours attract a surcharge fee for all patients, including Concession Card Holders. Please be aware that if you are referred to an outside service, these providers may charge fees.

If you have any problems or queries with your account do not hesitate to discuss the matter with your doctor or Practice Manager.

AFTER HOURS CARE

Our telephone is answered 24 hours a day. After hours all telephone calls to East Adelaide Healthcare are diverted to our answering service, who will organise the appropriate care for you. Doctors of the Practice are contacted by them as required. In an emergency please call Ambulance Service on 000

APPOINTMENTS

The aim of this Practice is to keep appointments running to schedule. Priority is given to urgent cases where necessary and this may cause delays. If you require a longer appointment please advise Receptionist at time of booking.

INVESTIGATION/TEST RESULTS

All results are reviewed by the treating doctor. Please phone between 10am and 4pm for results, which will be given by the Registered Nurse at either location.

REPEAT PRESCRIPTIONS

A brief appointment is required for all prescriptions.

PHONE CALLS

The doctors will take urgent phone calls where possible. If unavailable the doctor will return our call or alternatively you may speak with the Registered Nurse.

FEEDBACK

If you are unhappy with any aspect of the care you receive, please discuss this with your doctor or Practice Manager, Mrs. Gina Bilibio.

We believe problems that arise are best addressed by the Practice. However, external complaints can be made to the Australia Medical Association - SA Branch ph 8361 0100
